METHOD, SYSTEM, AND PROGRAM FOR INTERFACING WITH ELEMENTS IN A DOCUMENT

ABSTRACT

Disclosed is a system, method, and program for generating an interface to elements in a document. The document defines a relationship of the elements and at least one attribute for each element. A class is generated for at least one element to implement methods from information provided on elements in the document and a mapping indicating at least one element in the document to map to a class. The at least one indicated element in the document for which the class is generated can be accessed and affected by the methods implemented in the class.
